

Ideation Phase

Define the Problem Statements

Date	26 July 2026
Team ID	
Project Name	Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau
Maximum Marks	2 Marks

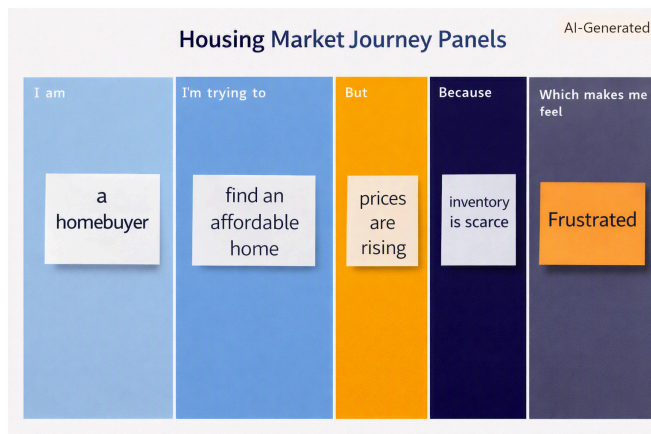

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Step	Description
I am	A homebuyer exploring the housing market — typically a young professional or family seeking affordability, good location, and desirable features such as square footage, amenities, and neighborhood quality.
I'm trying to	Find a home that balances sale price with property features, using Tableau visualizations to understand market trends and make informed decisions.
but	Rising prices, limited inventory, and data complexity make it difficult to compare listings and identify fair value.
because	Market demand exceeds supply, interest rates fluctuate, and housing data is scattered across multiple sources without clear visualization.
which makes me feel	Frustrated by affordability challenges, anxious about missing opportunities, and overwhelmed by the lack of transparent insights.

Example:

Step	PS-1: Homebuyer Perspective	PS-2: Analyst Perspective
I am	A homebuyer exploring the housing market to purchase my first property.	A real estate analyst studying housing market trends for strategic insights.
I'm trying to	Find an affordable home that meets my needs for space, location, and amenities.	Use Tableau to visualize sale prices and property features to identify patterns and predict future trends.
But	Prices are rising rapidly, and listings are inconsistent across platforms.	Data sources are fragmented, and manual analysis is time-consuming.
Because	Market demand exceeds supply, and there's no unified visualization to compare sale prices and property features.	There's no integrated dashboard that consolidates data from multiple regions and formats.
Which makes me feel	Frustrated and uncertain about making the right investment decision.	Overwhelmed by data complexity and eager for a more efficient, visual approach.
